COMPOSITION LIMITS AT HIGH TEMPERATURES OF THE PHASE, WITH CUBIC STRUCTURE, CONSISTING OF ZrO_2 AND CaO . [1961] [10]p. 7 refs. Order from SLA ml\$1.80, ph\$1.80 61-10898

Trans. of la Chimica e l'Industria (Italy) 1959, v. 41, no. 9, p. 882-886.

At a temperature of $1600^\circ C$, in an oxidizing milieu, the phase with cubic structure is limited to a range lying between about 5 and 10% CaO , and correspondingly 95 to 90% ZrO_2 . With higher percentages of CaO , $CaO.ZrO_2$ appears in equilibrium with this cubic phase. For lower percentages, on the other hand, the ZrO_2 appears with a tetragonal structure, which probably holds a very small percentage of calcium oxide in solid solution. At lower temperatures the domain of the cubic solid solution is restricted, as the curve bounding its extension toward ZrO_2 tends to shift toward the curve bounding its extension toward $CaO.ZrO_2$. DESCRIPTORS: *Refractory materials, Chemical re-
actions, Corrosion, Temperature, Microstructure,
Metallurgical analysis

On the basis of the equilibria examined, it seems clear
that the behaviour of dolomitic refractories with re-
gard to iron oxides is not as good as that of magnesian
refractories. (Extract)
